

## Vessel Designer in The Netherlands

Have you ever considered working abroad? This is your chance! TopShore is looking for multiple Vessel Designers for our employers in The Netherlands. Read more!

### YOUR JOB

As the Designer (Vessels), you will work directly with the Head of Design and in collaboration with the Calculation department. You will contribute to the design and development of the design draft for the types of ships. Input for the design generally comes from the universal requirements of our customers, as well as outcomes from technical feasibility studies and the design drafts.

You will be responsible for developing, specifying and estimating the conceptual design. In accordance with legislation and regulations you work towards successfully meeting clients' requirements by acting within your employers operating principles and engineering standards. In this way you contribute to the successful closing of a project. Within this role, you will be expected to carry out the following tasks and responsibilities:

- performing hydrostatic and hydrodynamic calculations
- creating drawings, including general plans and drawings for weight determination and construction
- participate in discussions with shipping companies and subcontractors regarding the capacity of the ship, including loading capacity, speed, the ship's layout, and the products to be fitted, such as motors, cranes etc
- providing technical support to the Calculation department
- developing new concepts for expanding the portfolio of vessels.

### YOUR PROFILE

To be eligible for the position of Mechanical Designer you must have the following:

- a bachelor or master degree in (Naval) Engineering
- both theoretical and practical knowledge of hydrostatics, stability, hydrodynamics, construction, and strength theory
- an aptitude for conceptual thinking
- proficiency working with calculation and drawing software
- insight into the feasibility of the customers' wishes and requirements, with sufficient creativity to convert them into concrete designs
- familiarity with both national and international ship laws and (safety) regulations
- excellent communication skills in English, both spoken and written;
- Committed to work in The Netherlands for a minimum of 12 months.

! Please note, only *ingenios* with EU work visa will be considered as viable candidates. An online assessment and screening can be part of the recruitment process.

### OUR OFFER

TopShore offers job opportunities for Spanish *Ingenios* in The Netherlands for a minimum of 18 months. We set you up with an employer (with salary between €2200 and €4000 gross per month, depending on experience), assist you in finding a home and help you grow by offering courses and training.

Going abroad to The Netherlands puts extreme added value to your career, because our country has been so innovative and progressive throughout the years. Working 1-2 years in The Netherlands adds the same value to your experience as working for 5-6 years in your home country.

### RECRUITMENT PROCESS

Send your CV (in English) to [info@topshore.com](mailto:info@topshore.com) mentioning this vacancy.

If your CV proves to be interesting, we will set up a Skype interview. The selected *ingenios* will be interviewed live in Madrid after which we will match you with one of our Dutch employers.
